FIELD INTELLIGENCE
KRISHIVISION AI

KrishiVision AI

AI-powered crop disease detection and field advisory for earlier, more confident farm decisions.

Made with GAMMA

THE NEXT 12 HOURS

Farm decisions change with the next 12 hours

Signals move together

Weather, humidity, crop stage, and disease pressure shift as one field condition.

Advice becomes practical

KrishiVision AI turns those signals into a directive a farmer can use.

SAMPLE FARMER PROFILE

5.5 acres

Ramesh Patel

Ludhiana, Punjab

Wheat · tomato · rice · potato

Made with GAMMA

ONE WORKFLOW

One dashboard connects climate to action

01

Select the district

Locate the farmer’s district.

02

Read the conditions

Humidity, temperature, wind, and rain probability.

03

Check the window

Fungal risk and optimal spray timing.

04

Scan the leaf

Start when symptoms appear.

05

Keep the record

Review diagnoses and treatments in recent scans.

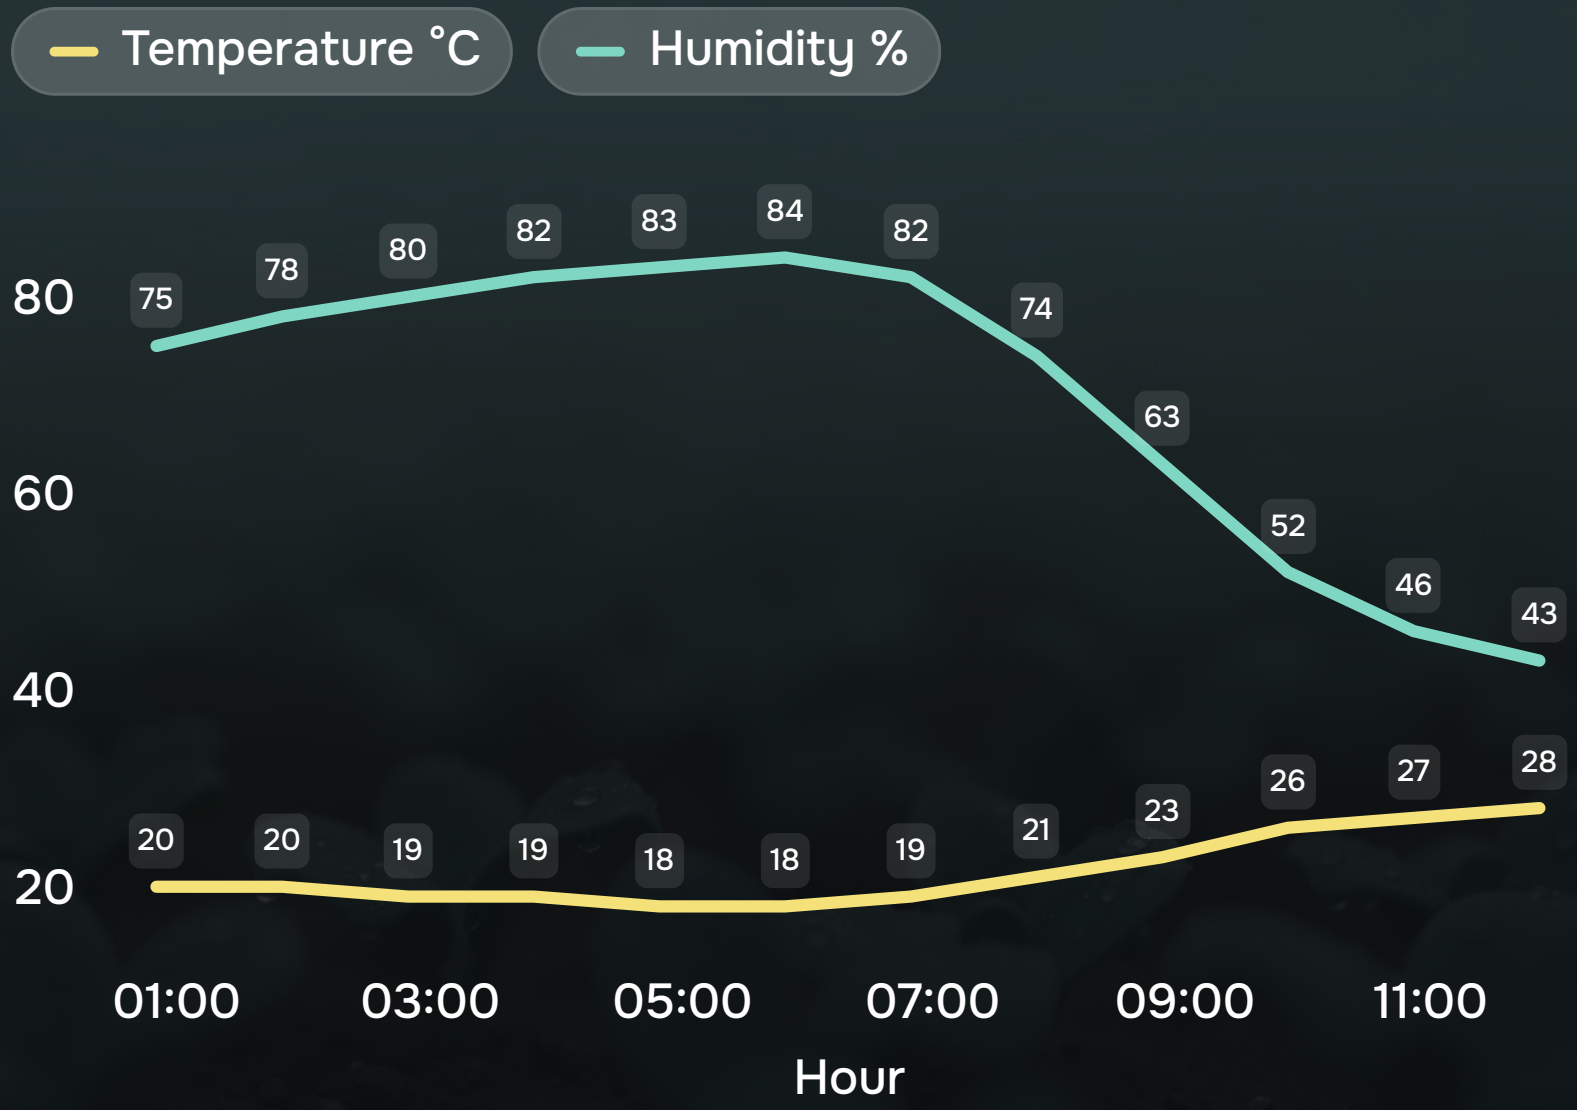

Made with GAMMA

ILLUSTRATIVE LUDHIANA CONDITIONS

Climate signals reveal fungal pressure early

Humidity peaks before the spray window opens as conditions dry and warm.

HIGH SPORE RISK

Reference conditions: 83% relative humidity · 18.5°C · 3.6 km/h wind · 0% rain probability.

Made with GAMMA

FROM ALERT TO ACTION

Alerts become field-ready directives

CRITICAL

High relative humidity and condensation increase fungal spore pressure.

PRIORITY THREATS

Late Blight

Yellow Rust

Powdery Mildew

IMMEDIATE ACTION

Withhold overhead irrigation.

Inspect bottom foliage. Schedule a protective bio-fungicide or copper spray.

Made with GAMMA

LOCAL AGRONOMY

Daily agronomy keeps advice local and seasonal

Rabi-season guidance is tailored to the farmer’s primary crops.

Topics rotate across sowing and soil, irrigation, pest defense, nutrients, and harvest care.

Prepare

Build a fine seedbed.

Treat

Treat seed before drilling.

Check

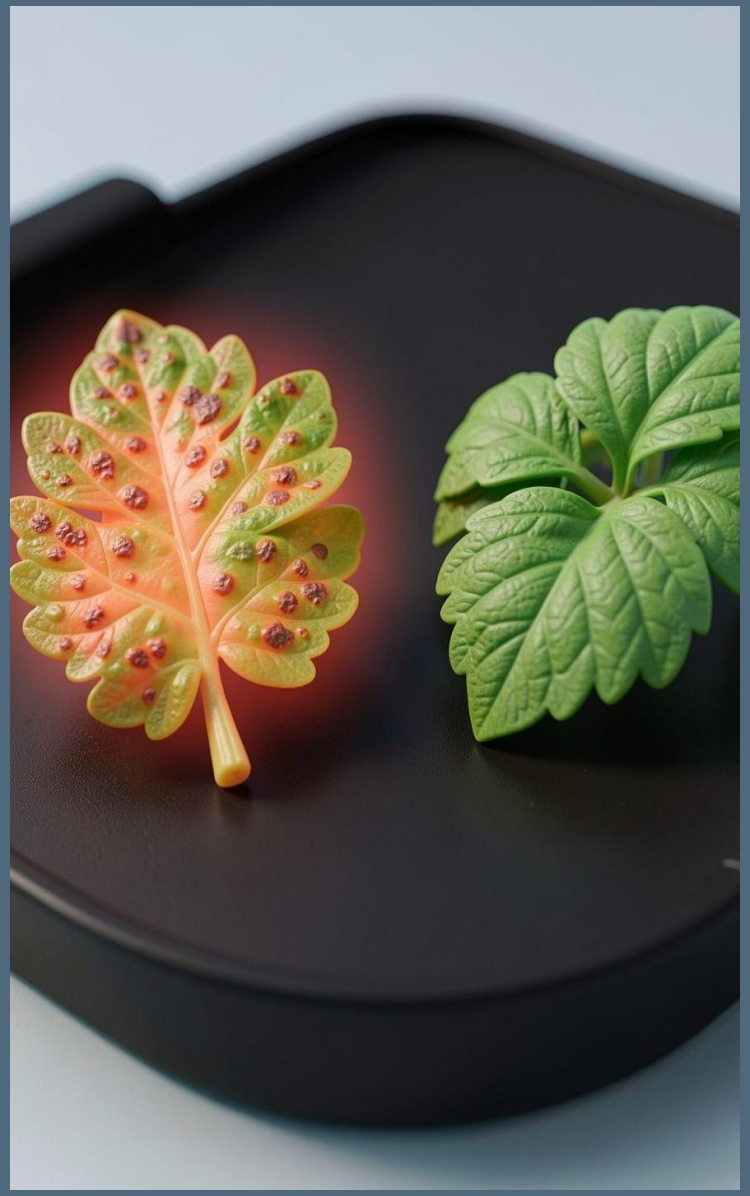

Check germination 72 hours before sowing.

Made with GAMMA

LEAF-LEVEL EVIDENCE

Leaf diagnostics turn symptoms into next steps

1. Tap a curated crop specimen to run AI vision detection.
2. Reveal the suspected disease, severity, confidence, and Grad-CAM heatmap.
3. Move from visual evidence to treatment guidance in one flow.

Made with GAMMA

CROP COVERAGE

Designed for multiple crops and disease patterns

Crop	Pattern in the specimen set	Screening focus
Tomato	Early Blight	Early Blight and healthy leaf examples
Potato	Late Blight	Late Blight
Wheat	Yellow Stripe Rust	Yellow Stripe Rust
Rice	Bacterial Leaf Blight	Bacterial Leaf Blight
Maize · cotton · sugarcane	Additional specimens	Rapid screening across more patterns

Made with GAMMA

SEASON-LONG MEMORY

Every scan adds a record the farmer can act on

2	1	1	0
TOTAL SCANS	HEALTHY CROP	DISEASE DETECTED	ACTIVE ALERTS

SAMPLE RESULT

Tomato Early Blight

Medium severity · 95% AI confidence

SAMPLE RESULT

Healthy Tomato Leaf

98% AI confidence

Illustrative dashboard summary and scan results. Recent scans make progress visible across the season.

Made with GAMMA

FROM SIGNAL
TO INTERVENTION

KrishiVision AI closes the loop

- See risk before disease spreads.
- Choose the right moment to irrigate or spray.
- Diagnose symptoms faster at leaf level.
- Keep advice and scan history in one place.
